

Who?

Master students and PhD candidates studying natural sciences.

Where?

At the Helmholtz Centre for Environmental Research in Leipzig (Germany).

When?

25th February to 1st March 2019.

Only a limited number of people can participate in the Winter School.

There is no course fee. Catering during the day and accommodation will be provided. Please contact us to get information on travel funds.

Please register until December 15th by sending an application form at:
<https://eia.pg.edu.pl/teachener/application>

For any further questions feel free to contact us by email:
maciej.galik@pg.edu.pl

Interdisciplinary thinking in an interconnected world is as interesting as indispensable.

Come to the TEACHENER Winter School to broaden your horizon!

The TEACHER Winter School

Science and technology related to energy systems and energy technologies are part of a larger context of policies, market structures, power relations and values, beliefs and ideologies – in short: are part of society.

The debates around CO₂ emissions and climate change, fossil fuels and nuclear energy, renewable energy systems and smart metering transcend the technical, engineering and natural scientific approach to complex energy issues.

Against this background perspectives from social science and humanity (SSH) can enrich higher education in natural science and engineering studies related to energy systems.

The TEACHER winter school offers 4 courses that enable participants improving skills and competences in social and ethical dimensions of energy issues.

For more information please visit:
www.teachener.eu

Teaching Program

Four courses will be taught:

- **Technology assessment** – *An approach for organizing societal discourse on innovative energy technologies.*
- **Conflict management** - *Understanding and managing conflicts on energy technologies.*
- **Ethics and philosophy of energy development** - *Fundamental questions behind the use of energy.*
- **Energy and the public** - *The challenge of understanding public responses.*

Additionally technical visits and guided tours will be organized.

Co-funded by the
Erasmus+ Programme
of the European Union

The Venue

The **Helmholtz Centre for Environmental Research – UFZ in Leipzig** is one of the world's leading research centres in the field of environmental research, enjoying high social recognition. It demonstrates ways in which a sustainable use of our natural resource base is possible for the benefit of both humankind and the environment. In dealing with complex environmental issues, the disciplinary borders between the natural-, engineering- and social sciences need to be overcome. The UFZ has extensive competences in integrated environmental research.

The **city of Leipzig** is unique: Here you will experience a cosmopolitan atmosphere and room for creativity and new ideas. Come to Leipzig, where all the best is so close: cultural highlights for music and theater enthusiasts, museums and galleries worth discovering and of course legendary pub miles.
